ZERO WASTE EUROPE LIVE!

5 FEBRUARY 2019 2PM

MIREIA ROURA PROJECT MANAGER AT DONALO

HOW TO EXTEND THE ELECTRONIC DEVICES LIFESPAN AND REDUCE E WASTE AT THE CITY LEVEL LEARNING FROM THE BARCELONA EXPERIENCE

How to test, inventory and distribute second-hand electronic devices through a certified protocol? How to trace them to be sure they will be recycled at the end of their useful life?

Mireia Roura, project manager donalo.org

It's a digital platform and a meeting point where companies donates all kind of material, especially digital devices, to social entities

BEFORE EREUSE

Distribution of non suitable computers

We had no answers for the donor. Only the beneficiary NGO

We couldn't scale the activity and we didn't want to replicate existing structures

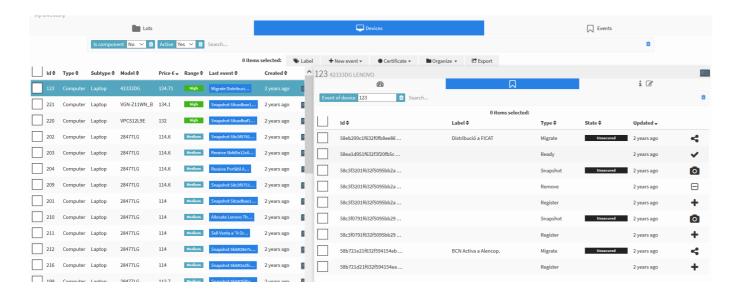

Global traceability

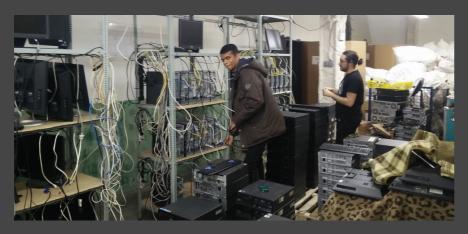

The donor has access to a **link** for each device with the following information:

- -Who refurbished it
- -Who received it and what price they paid
- -Where it has been recycled

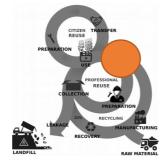

Software open source to:

-Testing devices to estimate its use value
-Hard disk erase
-Inventory at component level
-Labelling with smart label
- Selling price according to a transparent algorithm and value of use.
-Inventories can be shared with other circuit members

Common resources to:

-Follow the same protocol
-A virtual currency (the value of use) to compensate each other for the exchange
-Management agreements

- -NGOs pay a **protected cost,** according to the costs of circularity
- -They receive the devices in **cession of** use
- -When they no longer want the device, they must warn the circuit, which decides whether it can be sent for recycling or recirculated again.
- -Possibility of **renting** thanks to the computation of hours of use of the computer
